Customer Journey Map: Metro Ticketing System

	1. Entice Awareness & Discovery	2. Enter Accessing Portal	3. Purchase Booking & Payment	4. Engage Validation & Travel	5. Exit Completing Journey	6. Extend Post-Travel Review
Steps / Actions What does the person do?	Arrives at station, sees long queue, spots digital ticketing poster.	Scans poster QR code, opens ServiceNow Service Portal on mobile browser.	Selects route variables, views auto-calculated fare, and submits payment.	Widget generates QR e-ticket. Scans screen at AFC gate & boards train.	Reaches destination, scans digital QR again at exit gate, leaves.	Receives confirmation SMS, logs into portal to check past booking records.
Interactions People, Places, & Things	**People:** Commuters, Guards **Places:** Station Concourse **Things:** Physical Posters	**People:** N/A (Self) **Places:** Away from Queue **Things:** Mobile, Service Portal	**People:** N/A **Places:** ServiceNow Catalog **Things:** UI Policies, Scripts	**People:** Gate Security **Places:** AFC Boarding Gate **Things:** spModal Widget	**People:** Other exiting crowds **Places:** Destination Gate **Things:** Ticket Validation DB	**People:** N/A **Places:** ServiceNow Dashboard **Things:** Email/SMS Notifications
Goals & Motivations "Help me..." or "Help me avoid..."	"Help me avoid waiting in this massive line."	"Help me access the digital system quickly and easily."	"Help me complete payment without errors or confusion."	"Help me get through the gate immediately to board."	"Help me exit the station smoothly without hassle."	"Help me keep track of my travel expenses."
Positive Moments Enjoyable, productive, or fast experiences	Relief knowing there is an alternative to the long line.	Service Portal interface is clean, fast, and mobile responsive.	Client scripts instantly & transparently calculate the correct fare.	Bypassing the manual queue entirely with a touchless QR scan.	No searching pockets for a small paper token that could be lost.	Data is securely stored in backend tables for future reference.
Negative Moments Frustrations or hesitations	High stress due to crowd, noise, and fear of missing the train.	Poor mobile data reception inside the station might delay portal load time.	Anxiety about digital payment failing or timing out on the form.	Low screen brightness or screen glare causing the QR scan to fail initially.	If the browser tab was closed during the ride, finding the ticket again can be annoying.	Current portal requires manual checking for past travel logs.
Areas of Opportunity Strategic ideas to improve the step	Provide an SMS shortcode on posters to text for the booking link directly.	Implement free "Metro Wi-Fi" at stations specifically for fast ServiceNow access.	Use Geolocation to auto-populate the "Source Station" variable on the form.	Add a script to maximize screen brightness when the spModal widget opens.	Allow users to export the QR code to Apple/Google Wallet for offline access.	Develop a custom portal dashboard tracking monthly spend & frequent routes.
