Project Design Phase

Proposed Solution

Date	03-10-26
Team ID	23KD1A4230
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Daily commuters face significant delays and frustration due to long queues, manual cash-handling, and easily lost paper tickets. This physical bottleneck causes high operational costs for metro management and lacks real-time travel data tracking.
2.	Idea / Solution description	A fully contactless digital metro ticketing system built natively on the ServiceNow platform. The system uses client scripts to calculate dynamic fares instantly and generates a secure, scannable QR code e-ticket directly on the user's device, backed by automated Flow Designer workflows.
3.	Novelty / Uniqueness	The solution uniquely repurposes an Enterprise Service Management platform (ServiceNow) traditionally used for internal IT ticketing into a high volume B2C public transit system. It eliminates the need for expensive custom app development from scratch by leveraging native ServiceNow features (spModal, GlideAjax, Catalog Items) for rapid, secure deployment.
4.	Social Impact / Customer Satisfaction	Drastically improves the daily commuter experience by reducing ticketing wait times to zero and lowering travel anxiety. Environmentally, it drives sustainability by completely eliminating the waste of single use paper tickets and plastic tokens.
5.	Business Model (Revenue Model)	1. Direct Ticket Sales: 100% automated collection of passenger fares via digital payment gateways.

		2. Data Analytics: Monetizing anonymized, aggregated commuter travel trends for urban planning and localized advertising.
6.	Scalability of the Solution	Inherently highly scalable due to ServiceNow's multi-tenant cloud architecture. The system effortlessly handles massive traffic spikes during peak rush hours and can be rapidly expanded to include new metro stations, additional transit lines, or entirely new cities without requiring physical infrastructure upgrades.
